Professional Summary

AI/ML engineering student with practical experience in full-stack development, real-time industrial systems, and machine learning research, including work on large language models. Strong problem-solving skills with a commitment to continuous learning and delivering user-focused solutions.

Education

B.Tech CSE-Artificial Intelligence and Machine Learning, VISTAS, Chennai Expected May 2027

High School, Shri Anand Jain Vidyalaya Mat HSS, Chennai May 2023

Work Experience

Software Automation Intern, Geo Prompt Systems Dec 2025 – Jan 2026

- Led a team of 5 interns in developing a full-stack SCADA desktop application using React, Electron, and Python for real-time industrial monitoring.
- Implemented Modbus TCP communication for live PLC monitoring/control; added WebSockets, tag management, and persistence-based dashboards.

Intern, Edunet Foundation Jan 2025 – Feb 2025

- Developed and optimized CNN models for image classification using PyTorch.
- Collaborated using Git/GitHub to support remote workflow and debugging.

Projects

- **LLM Probe – Activation-Based LLM Analysis Tool** – Building a tool that detects memorization and hallucination in open-weight LLMs (Phi-3-mini-4k-instruct) directly from internal activations, without relying on external reference corpora. A jailbreak/security probe is planned as a stretch goal. *(Python, PyTorch, Transformer Interpretability)*
- **AI Network Topology Generator** – Designed a reinforcement learning agent that generates cost- and resilience-optimized network topologies from device-count and connectivity constraints, with a live web dashboard for visualizing and comparing generated designs. *(Python, Reinforcement Learning)*
- **Reminder – Cross-Platform Productivity Ecosystem (Open Source with active users)** – Full-stack productivity app (Android & Windows) with real-time sync, offline support, and conflict resolution for multi-user data consistency, serving multiple users. Self-hosted the backend on a Raspberry Pi (Spring Boot, MySQL, Nginx) with JWT-based auth and maintained reliable self-hosted deployment over 3 months. *(Java, JavaFX, Spring Boot, MySQL, Nginx)*

Technical Skills

Languages: Python, Java, C++, C#, HTML, CSS, JavaScript
Frameworks & Libraries: TensorFlow, Pytorch, NumPy, Pandas, Matplotlib, React, Electron, JavaFX
Tools & Platforms: Android Studio, VS Code, IntelliJ IDEA, MySQL, Git/GitHub, Node.js

Certifications

- InnoKnowvex – Machine Learning
- MATLAB – Deep Learning & Computer Vision
- InLustro – Python for Data Science
- InLustro – Corporate Technical Readiness Program in Python
- NPTEL – Database Management System
- NPTEL – Cloud Computing

Achievements

- Runner-up in MEDNEXUS'26 – A national level AI Healthcare Hackathon
- III-place in Brain Bee Quiz – Vels National Scitech Awards
- Solved 200+ DSA problems in Leetcode
